1 INTRODUCTION

1.1 Purpose of the document

The purpose of this document is described from a high-level point of view the M-Bus communications features of the M-Bus Product.

2 COMMON FEATURES TO ALL VERSIONS

The M-Bus product embeds a new concept of Itron M-Bus product that allows a full customization of the content of the M-Bus frames.

This is achieved using definition of Block of data that are configurable in 16 different frames.

This is described in the second part of this document.

The first part is dedicated to the description of the standard product as it is delivered from factory if no specific configuration has been required.

2.1 MBUS Hardware features

The Physical layer of M-Bus product is fully compliant with the EN13757-2 Standard, M-bus connection is non-polarized and the Unit Load (UL) requested on the bus is 1,5UL.

The Baudrate is by default selected from factory to 2400 Bds but can be set to 300Bds.

2.2 MBUS protocol/standard

The M-bus communication protocol implemented in M-Bus product is compliant with last MBUS standard EN13757-3 version 2013.

	ITRON	Page 3 of 20	CONFIDENTIAL
	Property of ITRON Do not disclose, use or reproduce without written approval from ITRON		Doc. Issue: 0.7

2.3 MBUS Format/Unit

2.3.1 MBUS Format

The product can manage few different non metrics Units:

- Cubic meter (M^3) for Volume Index, and Liter /hour (L/h) for Flow
- Imperial Gallon for Volume Index, and Imperial Gallon / Min for Flow
- US Gallon for Volume Index, and US Gallon / Min for Flow
- Cubic Feet for Volume Index, and Cubic Feet / Min for Flow

This is possible during manufacturing and is done only for personalized version

2.3.2 MBUS Units

The product uses a basic rule for volume index format and unit transmitted in the M-bus frame, it uses the same unit as for the LCD Display. That means, for instance, that if the display is set to 5/3, (5 digit before the coma, and 3 after), meaning a display in Cubic meters but with 3 decimals, then last digit=Liters.

The unit used for the transmission of the index, backflow, FDR in all M-bus frames will be liters (VIF 13)

If the Display is 6/2, then last digit = 10liters, so the M-Bus format will be 10 of liters (VIF 14)

In the following tables this is mentioned as VIF 12-14.

The choice can be done only during manufacturing and can't be changed on field.

The possibilities according to the format (see previous chapter) are

For cubic meters:

- 0, 0001 m³, 0,001m³, 0,001m³, 0,1 m³ => VIF Values from 12 to 15

Or for Imperial Gallons:

- 0,01 Imp Gallon, 0, 1 Imp Gallon => VIF Values FC/74/04/"laGi", FC/75/04/"laGi"

Or for US gallons:

- 0,01 US Gallon, 0,1 US Gallon (91/3D, 92/3D)

Or for Cubic Feet:

- 0,001 CuFt, 0,01cuFt, 0,1 CuFt, (FC/73/04/"tFuC", FC/74/04/"tFuC",FB/21)

Note that for the flow rate, the unit are fixed, whatever the display and are transmitted accordingly in:

- Liter per hour
- Imp Gallon /Min
- US Gallon /Min
- Cubic Feet /Min

	ITRON	Page 4 of 20	CONFIDENTIAL
	Property of ITRON Do not disclose, use or reproduce without written approval from ITRON		Doc. Issue: 0.7

2.4 Standard command/request

The M-bus product can manage the following command or request

- Addressing
 - o Primary addressing
 - o Secondary addressing (Selection C=SND_UD=43h/53h/63h/73h, CI = 52h)
 - o Extended secondary addressing (selection with Customer Id)
- Request
 - o Frame request (C= REQ_UD2=4Bh/5Bh/6Bh/7Bh)
 - o Status request (C= REQ_SKE=49h)
- Command (C Codes)
 - o Application Reset (SND_NKE, C= 40h)
 - o Baud Rate Change (C= BBh : 2400 Bds, C= B8h : 300 Bds)
 - o Frame Selection (C = SND UD, CI =50)
 - o Primary address Modification (C = SND UD,CI =51, DIF/VIF= 01h/7Ah)
 - o Secondary Address Modification (C = SND UD,CI =51, DIF/VIF= 0Ch/79h)
or (C = SND UD, CI =51, DIF/VIF= 07h/79h)
 - o Date and time setting
 - Date and date setting Using CI=6Ch command
 - Date and Time Adjustment using CI=6Dh Command
 - Date and time setting using (C = SND UD,CI =51 DIF/VIF= 04h/6Dh)

3 M-BUS FRAMES OF STANDARD VERSION

3.1 Overview

The Product in standard configuration has 5 different frames (0 to 4) accessible using the selection frame command.

The frame 00, so called Default frame, is normally the frame requested on a regular basis to get all the main information from the meter

The other are used to get more advanced features

Note that, due to the big number of values using the same DIF and VIF, the Storage number is used to distinguish the nature of the value. This can be useful to parse and filter data, if they are all received in the same buffer and not managed in real time.

Here below is the table containing the Frame numbers and their designation:

NAME	Designation
Frame 0	Default Frame
Frame 4	Fixed date reading (FDR)

3.2 M-Bus Configuration Tool

3.2.1 Global Strategy

The configuration tool allows the following actions:

- Visualization and demo of all the standard M-Bus capabilities of the product
- Highlight all the features of the product (Metering, water intelligence, alarm...)
- Display and modification of the parameters
- Reading of advanced values
- Basic M-Bus setting modification (Address, Date & Time...)
- Parameterization of the advanced functions (Threshold...)
- On field investigation in case of problem
- Frame configuration

To have a complete view of the features of this M-Bus Field tool application, please refer to the user manual.

This Software “M-Bus Configuration Tool” is protected by a license attached to the machine.

Document ID : INTELIS / ECHODIS+ MBUS – MBUS Frame Description

3.2.2 Connection

The field tool, based on configuration, can communicate with the product using a M-Bus to USB (or RS232) converter.

It can be used:

- Point to point in broadcast mode
- In addressed mode, for instance if you are connected on field to an existing Bus.

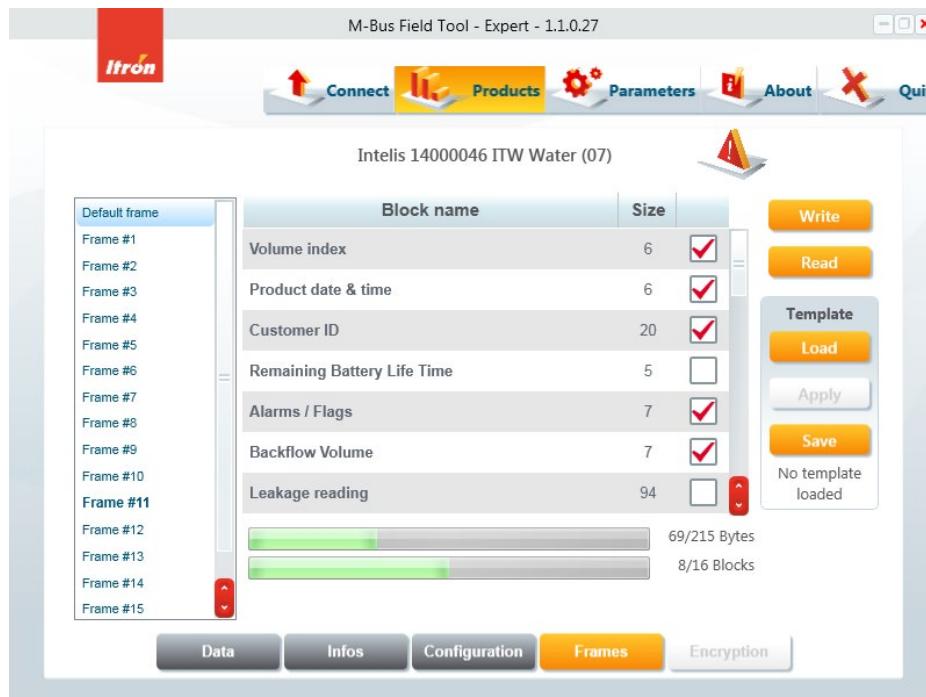

3.2.3 Screenshot

Here below are few screen shot of this application

3.2.4 Frame configuration

In order to use the new concept of configuration frame, this application has a specific screen in order to allow this function.

	ITRON	Page 7 of 20	CONFIDENTIAL
	Property of ITRON Do not disclose, use or reproduce without written approval from ITRON		Doc. Issue: 0.7

3.2.5 List of blocks

Below is the list of possible blocks you can use in a frame

2 rules are applied by the application

- the size maximum of the payload cannot exceed 215 bytes (This is shown with the bar graph)

(the size of each block is calculated according to the unit, for instance "Imp Gallon" are the bigger one)

- It's not possible to set more than one manufacturer bloc in a frame

Block name	Size	
Volume index	6	<input checked="" type="checkbox"/>
Product date & time	6	<input checked="" type="checkbox"/>
Customer ID	20	<input checked="" type="checkbox"/>
Remaining Battery Life Time	5	<input type="checkbox"/>
Alarms / Flags	7	<input checked="" type="checkbox"/>
Backflow Volume	7	<input checked="" type="checkbox"/>
Leakage reading	94	<input type="checkbox"/>
Fdr	106	<input type="checkbox"/>
Highest peak	13	<input type="checkbox"/>
Volume above threshold	25	<input type="checkbox"/>
Volume below threshold	25	<input type="checkbox"/>
Times of use	49	<input type="checkbox"/>
Customer billing	14	<input checked="" type="checkbox"/>
Current flow	5	<input checked="" type="checkbox"/>
T° below threshold (Specific block)	64	<input type="checkbox"/>
Flow repartition (Specific block)	50	<input type="checkbox"/>
Meter info (Specific block)	23	<input type="checkbox"/>
Echodis frame (Specific block)	215	<input type="checkbox"/>
Volume BCD	6	<input type="checkbox"/>
Flowrate BCD	5	<input type="checkbox"/>

6 ANNEX 3: FRAMES DESCRIPTION

6.1 *The default frames*

The default frame is the frame with Number Identification “00” read on REQ-UD2 after Application Reset or if the frame selection 00 is used.

It contains the main information of the meter, and is composed of the blocks: 0, 1,2,4,5, 12, 13, 16

Designation	U	T	S	Data	Value	Fct.	VIB
S/N #	0	0	0	BCD8	14000046	Inst.	Fabrication Number
Volume index	0	0	0	INT4	0	Inst.	Volume in 0, 1 l/ 1l/ 10 l/ 100l
Date & Time	0	0	0	INT4	17.09.2014 13:02	Inst.	Time Point [Date+Time]
Meter Identification	0	0	0	Var.	I14VB004788	Inst.	Enhanced Identification
Alarm Flags	0	0	0	BIN4	0	Inst.	Error Flags (binary)
Backflow Index	0	0	0	INT4	0	Inst.	Volume in 0, 1 l/ 1l/ 10 l/ 100l => Accumulation of Abs. Value only if Neg. Contrib.
Billing date	0	0	45	INT2	01.12.2000	Inst.	Time Point [Date]
Billing Index	0	0	45	INT4	0	Inst.	Volume 0, 1 l/ 1l/ 10 l/ 100l [l]
Flow	0	0	0	INT3	0	Err.	Volume Flow [l/h]
Temperature	0	0	0	INT2	0	Err.	Flow Temperature 100 [m°C]

(U= Unit, T=Tariff, S= Storage, Fct. = Function, VIB = Variable Information Block)

6.2 Auxiliary description.

The alarm Block is composed of 4 bytes containing 32 flags of alarm.
 These flags can be simple warnings or alarms
 They can be temporary (real time or cyclic i.e. daily for instance) or permanent
 (memorized).
 In case of permanent flags, only a configuration tool can remove them
 Byte 0 (Lsb) is received first in the frame and Byte 3 (MsB) is the last

	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
Byte 3	A32	A31	A30	A29	A28	A27	A26	A25
Byte 2	A24	A23	A22	A21	A20	A19	A18	A17
Byte 1	A16	A15	A14	A13	A12	A11	A10	A9
Byte 0	A8	A7	A6	A5	A4	A3	A2	A1

Designation		Designation	
A1	Daily volume Above threshold	A17	Meter Stopped
A2	Yearly volume Above threshold	A18	Reversed meter
A3	Daily volume below threshold	A19	Broken Pipe Alarm
A4	Yearly volume below threshold	A20	Manufacturer specific 1
A5	Daily Water temp Above alarm	A21	Date and time reconfiguration
A6	Monthly Water temp Above alarm	A22	Manufacturer specific 2
A7	Daily Water temp Below alarm	A23	Deb Battery Alarm
A8	Monthly Water temp Below alarm	A24	Daily leakage
A9	Monthly leakage	A25	Manufacturer specific 3
A10	PKF_Daily_Alarm	A26	Battery
A11	PKF_Month_Alarm	A27	Memorized removal

A13	D-1 Daily backflow	A29	Real time removal
A14	Monthly backflow	A30	Manufacturer specific 5
A15	Daily Air in pipe	A31	Manufacturer specific 6
A16	Monthly Air in pipe	A32	Reconfiguration

6.3 Fixed date reading frames (FDR)

The Fixed Date Reading frame so called FDR frame, is the frame with Number Identification "04" read on REQ-UD2 after frame selection 04 is used.

It contains the information related to the monthly indexes of the latest 13 months.

It is composed of the blocs: 0, 1, 4, 7

Note that Blocks 0, 1, 4 (Index, D&T, and Alarms) are duplicated in this frame

Designation	U	T	S	Data	Value	Fct.	VIB

**Document ID : INTELIS / ECHODIS+ MBUS – MBUS Frame
Description**

1 Slave primary address

Addr	Address of slave
FDh	Primary Address in case of secondary addressing
FEh	Broadcast address with response
FFh	Broadcast address without response

2 Meter status

bit 0	Unused (always 0)	
bit 1	Unused (always 0)	
bit 2	Unused (always 0)	
bit 3	Permanent Error	(Us asic)
bit 4	Temporary Error	(Backflow, air in pipe, Overflow, Dirty deposit)
bit 5	Unused (always 0)	
bit 6	Unused (always 0)	
bit 7	Unused (always 0)	

3 No frame to follow/Frame to follow

Only if manufacturer specific is needed(0F) or if there is a 1F)

4 Volume

12h	unit : 0,1 L
13h	unit : 1L
14h	unit : 10 L
15h	unit : 100 L

5 Backflow Volume

92h	unit : 0,1 L
93h	unit : 1L
94h	unit : 10 L
95h	unit : 100 L
