

Liquid ring vacuum pumps

two-stage

SIHI® Pumps

LOH 25003, LOH 25007, LOH 25309

Pressure range: 33 to 1013 mbar
Suction volume flow: 11 to 60 m³/h

CONSTRUCTION TYPE

Sterling SIHI liquid ring vacuum pumps are displacement pumps of uncomplicated and robust construction with the following particular features:

- handling of nearly all gases and vapours
- non-polluting due to nearly isothermal compression
- oil-free, as no lubrication in the working chamber
- small quantities of entrained liquid can be handled
- easy maintenance and reliable operation
- low noise and nearly free from vibration
- wide choice of material, therefore applicable nearly everywhere
- protection against cavitation as standard
- no metallic contact of the rotating parts

Die Sterling SIHI liquid ring vacuum pumps LOH 25003, LOH 25007 and LOH 25309 are two-stage ones. They can be applied without modification as compressors (see catalogue section liquid ring compressors).

APPLICATION

Handling and exhausting of dry and humid gases; entrained liquid can be handled during normal duty. The pumps are applied in all fields where a pressure of 33 to 900 mbar must be created by robust vacuum pumps.

- Fields of application are for example:
- chemistry and pharmacy for distilling and degassing
 - electric industry for impregnation and drying
 - plastics industry for degassing etc.

NOTE

During operation the pump must continuously be supplied with service liquid, normally water, in order to eliminate the heat resulting from the gas compression and to replenish the liquid ring, because part of the liquid is leaving the pump together with the gas. The liquid can be separated from the gas in a liquid separator (see catalogue part accessories).

It is possible to reuse the service liquid.

The direction of rotation is clockwise, when looking from the drive on the pump.

GENERAL TECHNICAL DATA

Pump Type	Units	LOH 25003	LOH 25007	LOH 25309
Speed	50 Hz 60 Hz	rpm	2800 3400	2800 3400
Maximum overpressure on compression	bar	2.0		1.2
Permissible pressure difference between suction and discharge side	max. min.	bar	2.0 0.2	1.2 0.2
Hydraulic test pressure (overpressure)	bar	3		
Moment of inertia of rotating parts Of pump and water content	kg · m²	0.004	0.0065	0.00875
Noise level at 80 mbar suction pressure	dB (A)	66 67		
Minimum permissible pulley diameter for V belt drive	mm	71 80	71 80	100
Maximum gas temperature	dry saturated	°C	200 100	
Service liquid:				
maximum permissible temperature	°C	80		
minimum permissible temperature	°C	10		
maximum viscosity	mm²/s	90		
maximum density	kg/m³	1200		
liquid capacity up to middle of shaft	litre	1.0	1.2	1.4
Maximum flow resistance of the heat exchanger	bar	0.2		

In selecting a pump, avoid choosing one which is likely to be operating at a combination of its maximum permissible limits e.g. maximum viscosity and maximum permissible pressure difference.

Materials

Item	COMPONENTS	MATERIALS	
		OK	42
0001, 0002	Vacuum casing	0.6025	1.4408
0010, 0011, 0012, 0013	Guide disc / Intermediate piece		
0030, 0031	Vane wheel impeller	1.4308	1.4517
0035, 0036	Central body	1.0553	1.4571
0200	Shaft	1.4021	1.4401
0500, 0600	Mechanical seal	Cr Ni-steel / carbon / Butadiene rubber	Cr Ni Mo-steel / carbon / Viton

Cut-away diagram LOH 25003, LOH 25007, LOH 25309

Performance Characteristics LOH 25003

The operating data is valid under the following conditions:

- Process media:
 - dry air: 20°C _____
 - steam saturated air: 20°C - - - - -
- Service liquid:
 - water: 15°C

Pressure of gas to be evacuated: 1013 mbar (Atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance on operating data is 10%.

The maximum consumption of make-up water occurs at the lowest suction pressure.

Performance Characteristics LOH 25007

The operating data is valid under the following conditions:

- Process media:
 - dry air: 20 °C _____
 - steam saturated air: 20°C -----
- Service liquid:
 - water: 15°C

Pressure of gas to be evacuated: 1013 mbar (Atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance on operating data is 10%.

The maximum consumption of make-up water occurs at the lowest suction pressure.

Performance Characteristics LOH 25309

The operating data is valid under the following conditions:

- Process media:
 - dry air: 20°C —————
 - steam saturated air: 20°C - - - - -
- Service liquid:
 - water: 15°C

Pressure of gas to be evacuated: 1013 mbar (Atmospheric pressure)

The suction volume is related to the suction pressure.

Tolerance on operating data is 10%.

The maximum consumption of make-up water occurs at the lowest suction pressure.
